

David Sumner

Full Stack Web Developer

Profile

I am a full stack web developer with 2.5+ years professional agency experience with a heavy lean towards the front-end side of development. I have also led and managed many web development projects to successful completion and launch and have been exposed to many aspects of Web, SEO, and Marketing, as well as having experience in handling web-related DevOps tasks when needed.

My backend knowledge primarily comes from the MVC framework Ruby-on-Rails and have a strong skillset in frontend development with my main CSS Framework being TailwindCSS and using AlpineJS as a Javascript framework when needed.

My strengths lie in having a very strong work ethic, and the knowledge to know that there is always more to learn. I currently have my goal set to transfer from Ruby-on-Rails to PHP & Laravel, along with Vue as my main Javascript Framework. although I also have an interest in React.

Employment History

Full-Stack Web Developer at Fuze

August 2021

- Began working on more complex websites and large-scale projects as the main developer. This ranges from websites handling subscriptions and payments to collaboration projects with a partner software engineering agency where the website consumes and displays custom API data
- Learned and began working on websites using Craft CMS and PHP
- Currently overseeing the database migration and deployment service migration of over 50 legacy websites and handling the maintenance and upgrades when necessary in order to save hosting costs long-term
- Handling the creation and management of AWS S3 Storage and IAM user policies to ensure security
- Leveraged coding best practices, effective peer code reviews, logging, secure coding, testing paradigms, resilient architecture patterns, and ensuring clean code complies with adopted coding practices.
- Managed front-end and back-end development and maintenance, spearheading website project builds across the company.
- Handling the maintenance and client-requested upgrades of large retainer legacy websites

Junior Web Developer at Digital Reflow

August 2020 — August 2021
